*Holistic Health
Refined with
Research*

True to our heritage, we provide solutions that sustain and advance natural health and wellness. We combine the best of nature with responsible, smart science to deliver exclusive products with effective results. With over 25 years of research experience, RBC Life understands and improves the strength of nature so we can deliver it to you.

item #43334 - 2 oz. / 60 ml.
item #43335 - 4 oz. / 120 ml.

FROM RBC LIFE SCIENCES®

HydraCel™

Alkalinize & Adjust pH

Key benefits:

- Improves alkalinity in drinking water
- Lowers surface tension of water for improved hydration

What is it?

HydraCel is a unique alkaline liquid that can help improve the pH of water and other beverages.

What is it formulated to do?

HydraCel can help improve the alkalinity (pH) of water and other beverages. Adding HydraCel to drinking water enhances its ability to hydrate the body and improve the quality of every drop you drink. It reduces the surface tension (the strength between the water molecules) of water for increased hydration.

Who may benefit?

Water is our most important nutrient and is essential for our health and vitality. Anyone who wants to improve the quality of their drinking water will benefit from HydraCel.

How is it used?

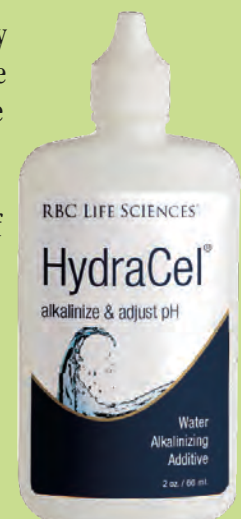

Add 1 drop of HydraCel per ounce of water. It is safe to use more if desired.

We all know the importance of drinking water, but do we know how to make water the healthiest it can be? There are a variety of factors that determine the quality of water... things you may not ever think about, such as pH and surface tension. These little-known characteristics can have a dramatic impact on health.

What exactly is HydraCel?

HydraCel is a natural mineral product developed with technology that allows us to create particles 100,000th the size of a single grain of sand. These tiny minerals can be used to improve water and increase the hydration of your body's cells.

These tiny mineral clusters increase the conductivity of drinking water. They act as microscopic transport vehicles, which help suspend and carry water and other nutrients to the cells. About 5 nanometers (billionth of a meter) in diameter, they are so small that 2.4 million of them can be placed side by side on the head of a pin. Incredibly, they have an enormous surface area of about 61,031 square feet per ounce.

The unique minerals in HydraCel will restructure your water, allowing it to hydrate your cells and perform its many vital functions more effectively.

HydraCel reduces surface tension

The surface tension of your drinking water affects how well it is absorbed. To utilize water, your body must reduce its surface tension. Tap water has a surface tension of 73 dynes, but the fluids that bathe your cells need a surface tension of only 45 dynes. A few drops of HydraCel in your water reduces its surface tension. With HydraCel, you can feel confident that your body is absorbing the water it needs to stay healthy.

HydraCel raises the pH of water

Our diet today tends to be too high in meat, sugar and additives, which creates acid in our systems. Our bodies are constantly battling to maintain a healthy, slightly alkaline pH. It is important not to let our body fluids become too acidic. One of the ways to do this is to consume alkaline foods and beverages. Tap water is usually neutral in pH so it does not combat acidity. However, when you add HydraCel to your drinking water it raises the pH to create an alkaline beverage for you to enjoy. Amazingly, it does this without changing the taste. So, now you can combat over-acidity everyday with each glass of water you drink.

Nutrient absorption

The surface tension of your drinking water is important because this affects not only how well your water is absorbed, but it can also affect how well your nutrients are absorbed. It's important to remember, it's not what you consume that's important, it's what you absorb.

Surface tension is a scientific way of measuring the water's ability to moisturize your food and supplements. You can't absorb nutrients unless they are completely hydrated. Many nutrients are covered with a thin layer of oil. They resist hydration and tend to remain dry. Water with a low surface tension breaks through the oil barriers and hydrates nutrients, allowing them to be absorbed.

Enhancing hydration

Experts estimate that 75% of Americans are chronically dehydrated. Even mild dehydration can slow your metabolism, cause fatigue, reduce short-term memory and contribute to many health challenges. Drinking more water is important, but drinking the right water is even more important. HydraCel will restructure your drinking water allowing it to hydrate the cells and perform its many vital functions more effectively

Directions: Add 8 drops to an 8 oz. glass of water or add one teaspoon to one gallon of water.

Reduces the surface tension of water for increased hydration.

Benefits: Alkalinizes water • Improves hydration

HydraCel® can help improve the alkalinity (pH) of water and other beverages. By adding HydraCel® to your drinking water you enhance its ability to hydrate the body and improve the quality of every drop you drink.

Ingredients: Purified water, potassium carbonate, silicon dioxide, magnesium sulfate, sunflower seed oil, polysorbate 20/80, potassium hydroxide.

Use only as directed. Keep out of reach of children. Avoid contact with eyes. If contact occurs, rinse with water. Store in a dry place at room temperature. Do not use if safety seal is broken or missing.
